

GREEN AUSSIE CLEANER

For Households and Businesses By The Founder of **Green Aussie Cleaner**

Welcome!

I personally would like to congratulate you on taking the time to investigate how my product can improve not only your health and financial circumstances but also those of your community. Like so many people, I have been most disheartened by the continual degradation of our quality of life by uncaring and unaware use of the resources of our planet.

Pollution has seeped into virtually every aspect of our existence. Yes it's all very well to complain, but what I realised years ago was that the **individual is the end consumer of most of these polluting substances and, as such, has the power to start making responsible life sustaining choices.**

As a businessman, I understand the constant pressures to increase profits even at the cost of our precious environment. As a lifelong surfer I have a great love of, and affinity with, water and decided to take action to prevent further pollution of this vital resource.

GREEN AUSSIE CLEANER is the result of that action. I believe we have, in this product, not only a reduction in packaging waste, but also a viable and affordable alternative to the cocktail of toxic chemicals we are encouraged to take into our homes, and flush into our waterways.

The vision we have is to take this product into the home or workplace and demonstrate/teach householders/workers how to save time, money, your family's health, and how to use the product efficiently to perform every cleaning requirement in your home. Yes it really is possible to have one efficient product to do virtually everything!!!!

What this means is that your cleaning goods bill **can be reduced by 50 – 80% per year**, for the average family of two adults and two children. It was quoted in a newspaper on the 02/09/12 that an average family may spend around **\$1600 – \$3600** per year on numerous household cleaning products.

This product is concentrated, **each litre makes 33 litres of general cleaning solution** or **250 litres of light cleaning solution**. It can also be used full strength without any harmful effects whatsoever.

NON-TOXIC means **NO POISONS**, which means **NO HARM**
to **you**, your **children**, your **pets**, your **home**, your **workplace** and your **planet**

Designed to be the **WORLDS most**
ENVIRONMENTALLY
Safe
CLEANER
